BIENNIAL REPORTS

Biennial Reports, submitted by the State Geologist to the State Legislature every other year, described work in progress at the Survey, what was accomplished, and goals for the future. Some earlier Biennial Reports also contained articles similar to those now published in the Report of Investigations series. The last Biennial Report was prepared in 1974. On July 1, 1974, the Missouri Geological Survey became the Division of Geology and Land Survey in the newly created Missouri Department of Natural Resources.

MAPS

Topographic Maps

In 1908, the U.S. Geological Survey and the State Survey, then known as the Missouri Bureau of Geology and Mines, entered into an agreement to develop topographic map coverage of Missouri. The first attempt was a 30-minute map (scale 1:125,000) which was made until 1910. Between 1910 and 1949, the 15-minute map (scale 1:62,500, 1 inch = 1 mile) was produced. The first 7½-minute map (scale 1:24,000, 2.6 inches = 1 mile) was produced in 1933, but it was not until 1949 that they superseded the 15 minute map in popularity and demand.

Complete coverage of the entire state requires 1,302 7½-minute maps.

In addition to topography, the maps also show buildings, towns, roads and highways, township boundaries, section lines, county boundaries, lakes, rivers, streams, and state parks. Many people find them indispensable for their work, recreation, and for various types of legal affairs.

The Geological Survey and Resource Assessment Division maintains an inventory of over 300,000 topographic quadrangle maps (7½- and 15-minute) available for sale. Forest overprints (woodlands shown in green) are sent unless plain maps are requested and as available. Maps are ordered by their individual names and **an index map is available upon request at no charge**. An index to coverage by each county in the state is also available at no additional charge.

Topographic quadrangle maps sell for \$6.00 each.

Map orders of less than 10 are sent folded; enclose \$1.50 extra for the tube if you wish them rolled. A discount of 25 percent is given on orders totaling of 25 or more topo maps. Over-the-counter service is available at the survey.

Lamination Service.

Maximum width is twenty-four inches. Specify glossy or mat finish. **Price \$2.00 per foot.**

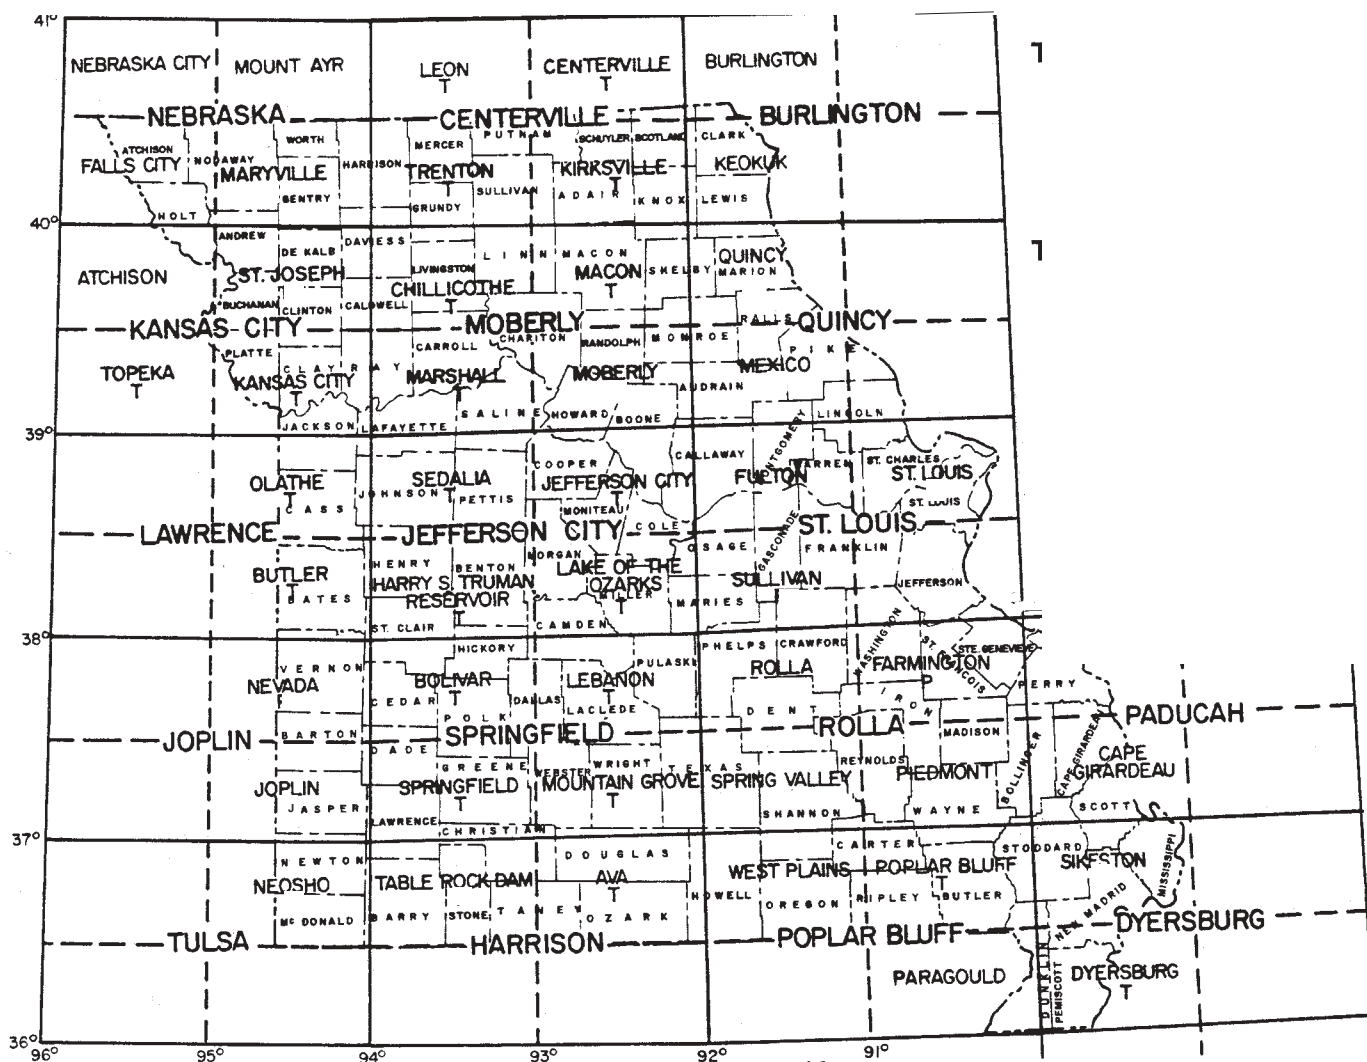

The U.S. Geological Survey has made available on CD-ROM scanned topographic maps (DRGs - Digital Raster Graphics). Each CD covers 1 degree latitude by 1 degree longitude and includes one 1 x 2 degree (1:250,000 scale) map, two 30' x 60' (1:100,000 scale) maps, and sixty-four 7.5' (1:24,000 scale) maps. **Price \$26.00 each.**

Missouri Environmental Geology Atlas -- M.E.G.A., A Collection of Statewide Geographic Information System Data Layers, Missouri Department of Natural Resources, 2003. CD containing MEGA Layers includes: Bedrock, Sinkholes, Counties, Springs, Certified Wells, Logged Wells, Public Water Wells, Dye Traces, Stream Hydrology --gaining and losing, Geological Structures, Major Streams, Lakes, Alluvium, Surficial Materials, Urban Areas, Public Land Survey System, and Major Roads. Software provided for viewing GIS data coverages and an Easy-to-Follow Manual. **Price \$45. With Training Included, Price \$60.00.**
